

Solar Pump Selection

Head/Lift Range: 4-180m. Daily Water Supply Range: 2-125 m³/day. Solar Radiation: 6kWh/m²/day.

Steps for System Design:

- To confirm the basic requirements of water consumption: Head and Daily water consumption; (e.g. 40m)
- Y axis corresponds to Head; X axis corresponds to Daily water supply; (e.g. 10m³/day)
- To adjust the system configuration in accordance with the local solar radiation condition. (e.g. SPM600H)
